### Trefoil 2 Gas Appraisal Well Update Bass Basin Tasmania

---

**Progress and Status:** Origin Energy, on behalf of the T/18P Joint Venture, advises that the Trefoil 2 well had reached total depth of 3,235m and as at 06:00 hours EDT on Thursday 26 November 2009 the current operation is plugging and abandoning the well. Several gas-bearing sandstones have been intersected within the targeted Eastern View Coal Measures. The significance of the well results will be determined over the coming months after the detailed analysis of cores, wireline logs, reservoir pressures and samples taken in the well.

The Kan Tan 4 semi-submersible drilling rig will move to the Rockhopper 1 well location when abandonment operations are completed at Trefoil 2.

**Well type and location:** Trefoil 2 is located in exploration permit T/18P, operated by Origin some 38km west of the Yolla gas field and will appraise the Trefoil gas field discovered by Trefoil 1 in 2004.

Trefoil 2 is a vertical well. The final surface location is:

Latitude: 39° 53' 07.9321" S  
Longitude: 145° 22' 14.6192" E

The primary objectives are the gas-bearing sands intersected in Trefoil 1 within the Paleocene and Cretaceous Eastern View Coal Measures.
